ISTE-608 Database Design and Implementation Homework #7 – SELECT statements and FUNCTIONS

DUE: Wednesday, October 10, 2018 by 11:59pm

Submit your script to the HW#7 Dropbox by the deadline.

Needed to complete: MySQL version 5

Download the createBOOK.sql script execute it to create the database shown in the ER diagram below.

Captured in English, the entities of this Universe of Discourse, and the relationships among them, can be described like this:

Book .. (1) identified by an **ISBN**, (2) written by one primary

BookAuthor and zero or more secondary **BookAuthors**, (3) categorized by subject matter **Category**, (4) published by **Publisher**, and (5) reviewed in a given **BookReview**

BookAuthor ... individuals that are either the primary or secondary author(s) of

a specific Book occurrence

Author ... individuals that are primary or secondary authors

BookReview ... the rating assigned to a specific **Book** occurrence by a given

Reviewer

Reviewer ... individuals that review Books and assign a rating to it

OwnersBook ... Books owned by Owners that are deemed to be in a certain

Condition as rated by a ConditionEvaluator

Owners ... individuals that *own* OwnersBooks

Condition ... the set of **Condition** "rankings" (1..5, corresponding to "bad",

"poor", "average", "good" and "excellent") that can be assigned to

an OwnersBook

ConditionEvaluator .. individuals that evaluate the condition of a book and assign a

Condition to it

Category ... the set of **BOOK** subject matter classifications

Publisher ... publishes BOOKs in a given U.S. State

State ... state codes and full state names

Query the database

For each of the tasks that follow you will write a SQL statement that will answer the question given the specifications provided. The results you should achieve are shown after each task (unless a sort order is specified, if your records appear in a different order but the content is the same, that is fine). The SQL statement for each task, along with a preceding comment denoting the task number, should be placed in a script that follows the format 'yourlastname HW7.sql'.

1. (17 points) Count the number of publishers that are in each city, statecode combination. Sort your results by Count in ascending order, followed by location in descending order. Your output should match the display given below (including column headings):

+-	+	+
	Location	Count
+-	+	+
	San Francisco, CA	1
	Rochester, MN	1
	Hartford, CT	1
	Boston, MA	1
	Rochester, NY	2
	Chicago, IL	3
	New York, NY	4
+-	+	+
7	rows in set (0 00 s	(ec)

⁷ rows in set (0.00 sec)

2. (31 points) For EVERY book in the book table, show the title, the count of the number of ratings, the minimum rating, the maximum rating, and the average rating rounded to the nearest penny. Your results should be sorted by the count of the number of ratings in descending order, followed by the average ratings in descending order. Your output should match the display given below (including column headings):

²³ rows in set (0.00 sec)

3. (23 points) Show the publisher name and count of books published for those publishers that have published more than two books. Records should be sorted by the count of books published in descending order, followed by publisher name in ascending order. Your output should match the display given below (including column headings):

+	++
Publisher Name	Book Count
ReadEmandWeep Romance Publishing CovertoCover Publishing EZRead Masterpiece Comics	5 4 3
3 rows in set (0.00 sec)	г

4. (18 points) Write a guery that will select all of the book titles that have "bill" in their name and will display the title of the book, the length of the title, and the part of the title that follows "bill". Your output should match the display given below (including column headings). (HINT: Use SUBSTR and INSTR.)

+		
title	_	After Bill
Yes! Networking is for Bills Fans How to Keep your Cellular Bill Down How to Keep your Cable Bill Down	33 35 32	s Fans Down
3 rows in set (0.00 sec)		гт

5. (11 points) Show a listing of used book titles that are available (used books are found in ownersbook). A title should only appear once in the listing. Your output should match the display given below (including column headings):

+
